

Credential Access Playbook (Rundll32 KeyMgr)

Objective:

Simulate and detect credential access behavior using rundll32.exe.

Attack Command:

```
rundll32.exe keymgr.dll,KRShowKeyMgr
```

Execution Steps:

1. Open PowerShell
2. Execute the command
3. Go to SIEM (Discover)
4. Filter last 5 minutes

Observed Event: Process: rundll32.exe Command: rundll32.exe keymgr.dll,KRShowKeyMgr

MITRE ATT&CK Mapping:

Tactic: Credential Access Technique: T1555

Detection Logic:

```
process.name: "rundll32.exe" AND process.command_line: "keymgr"
```

Severity:

Medium

Category:

Credential Access

Tags:

credential_access, rundll32, keymgr

Analysis:

The command accesses the Windows Credential Manager using a trusted system binary. This behavior is uncommon and may expose stored credentials.

Conclusion:

This activity simulates credential access using a Living off the Land technique.
