

Discovery Phase – System Enumeration

The following commands were executed to gather information about the system and user context.

These commands allow an attacker to understand the environment, including user identity, system details, and running processes.

In the SIEM, multiple events were identified within a short time window. This pattern indicates enumeration activity rather than normal user behavior.

The activity was classified as suspicious due to the sequence and timing of the commands.

The screenshot displays a security dashboard with a dark theme. On the left is a vertical sidebar with various icons. The main content area features a large alert box with the following text:

The execution of `whoami.exe` was detected on the host
This command is commonly used for user enumeration and may indicate activity

Additional discovery were also observed on the host, including `hostname`, `systeminfo` and `tasklist`, which may indicate an attempt to gather system information

Further investigation is recommended

Observed discovery commands:

Below this text is a comment from user 'AS aizen souske' added 2 seconds ago. Underneath the comment is a table with two columns: 'Timestamp' and 'path'.

Timestamp	path
whoami.exe = "Apr 20, 2026 @ 01:12:41.721"	"C:\Windows\system32\whoami.exe"
hostname.exe = "Apr 20, 2026 @ 01:12:55.221"	"C:\Windows\system32\HOSTNAME.EXE"
tasklist.exe = "Apr 20, 2026 @ 01:13:04.657"	"C:\Windows\system32\tasklist.exe"
Systeminfo.exe = "Apr 20, 2026 @ 01:13:14.080"	"C:\Windows\system32\systeminfo.exe"

On the right side of the dashboard, there is a sidebar with the heading 'External incident system' and a button labeled 'Add connect'.
