

Persistence Playbook (Registry Run Key)

Objective:

Simulate and detect persistence via Windows Registry.

Attack Command:

```
reg add HKCU\Software\Microsoft\Windows\CurrentVersion\Run /v persistence /t  
REG_SZ /d "cmd.exe /c whoami" /f
```

Execution Steps:

1. Open PowerShell
2. Execute command
3. Go to SIEM (Discover)
4. Filter last 5 minutes

Observed Event:

reg.exe → modifies Run registry key

MITRE ATT&CK Mapping:

Tactic: Persistence (TA0003)

Technique: T1547.001

Detection Logic:

process.name: "reg.exe" AND process.command_line: "CurrentVersion\Run"

Severity: High

Category: Persistence

Tags:

persistence, registry, windows

Analysis:

Registry modification for auto-execution at logon.

Conclusion:

Indicates persistence behavior.
